ORIGINAL POETRY.

I've seen the heir of guilt and wo, And marked his wandering eye; I've seen the tear of anguish flow, And heard the mournful sigh.

I've seen the victim of despair, A prey to want and sin; I've watch'd his brow, when sternly there Was stamp'd the curse within.

I've seen the lordling roll in state, And swell with bloating pride; I've seen when at the poor man's gate, The wretched outcast died.

I've seen the youth, whom pleasure's round Had early taught to stray; And those that by Intemperance found The flowery, fatal way-

These I have seen, but never yet Have marked the child of prayer, Abandoned by his God, to eat The bitter bread of care.

LOVE'S PROPER SEASONS. When summer breeze But waves the trees, Just as the sun declineth, Whose golden hues Around diffuse, And on each leaflet shineth;

When twilight's power (A gentle hour,) Its softness round is throwing, And 'mid the gloom A sweet perfume,

The gentle gale is blowing; When smooth and still The winding till, Its little waves are sending, While here and there The streamlets are, With it their waters blending;

When gliding through The modest blue, The moon her track pursuing, Gives to the night A tender light, A light-just fit for wooing;

Then gaily move And seek your love, Give soft and cogent reasons, And you will find, Tho' Cupid's blind,

These are his proper seasons. CIREX.

LINES.

I love to trace the purling rill, Where dazzling sunbeams play, Whilst round the pretty verdant hill, It winds its lonesome way ;

And there to choose the verdant bow'rs, That Nature's hands hath made, Hung round with sweetly scented flow'rs,

Then I'd not ask the breath of fame, To court my humble shrine, Nor loss of titles to my name, I ever would repine ;

But in its cool retreat I'd rest. And with a modest pen. Would tell how much more I was blest, Than in the haunts of men. LUCILIUS.

TO MISS -Steal not the ray from yonder light, To brighten up thy face, love ;. For e'en amid the gloom of night, A fairer one I trace, love.

It is the light of thy blue eyes, With life reflected there, love They vie with that which decks the skies, And seem to be more fair, love-

Then turn those eyes of love on me, All heaven is in their gaze, love; Oh! let me catch, love's light from thee, I'd die within its rays, love.

Selected by a Lady. LAURA, OR YES AND NO. Said groutle Laura, when I sigh,

'Tis no I would express,

When silent and with downcast eye, Then understand me, yes. The moon, by whose unconscious light The lover tells his tale.

Now beam'd from full meridian height, t'ale splendor o'er the vale;

The stars nocturnal brilliance shed. Each dane'd within its sphere; Perch'd on the cypress overhead, The sparrow charm'd the ear.

When, seated on the turf below, I thus address'd my fair,-Must hopeless sorrow ever flow, Must Strephon still despair.

Art thou as fickle as the moon, That scarce a month is true ! Must 1, to gain the blissful boon, For ever, ever woo !

Up to the silver orb she raised Her soft cerulean eye,

Then in my anxious face she gazed. And answer'd-with a sigh O ! happy hour, does that mean no.

Shall Strephon all his fears forego,

Enraptured now, I cried;

Will Laura be his Bride?

A blush suffused her lovely face. My trembling hopes to bless; She rush'd into my fond embrace, Her silence answered-yes. BELINDA

FOR THE SATURDAY EVENING POST. A PLEASANT TOUR. The country wins me still— I never fram'd a wish, or form'd a plan, But there I laid the scene.—Comper. Having seldom been but a few miles dis tant from the confines of the city, and a summer ride having become so very fashionable, I anticipated enjoyment by a few weeks absence, from which I have returned. I was fortunate in leaving Philadelphia on one of those days when the sun, in all its splendonr, sence, from which I have returned. I was fortunate in leaving Philadelphia on one of those days when the sun, in all its splendour, not only enlivens the present moments, but reflects some hope, in a fashionable phrase, that in the journey I would be "agreeably entertained"—The Steam Boat was the means of conveyance—and the prospects on the river Delaware, as is well known, are picturesque and beautiful; and I should suppose, without an exaggerated comparison, they are scarcely inferior to those on the river Thames—although the latter have been so eloquently described, that without the same hand to guide the magic wand (allow me the expression) comparison would now be futile—all that I can say is, by using the words of a charming female, whose piercing eye and auburn ringlets had attracted my attention, but from which it was turned to her medodous voice and appropriate expressions—she was conversing with a lady, who in beauty was by no means her inferior—at one time, as the Boat was making a short turn, she says "Oh, Matilda! did you ever see any stream so elegantly serpentine; did you ever see any thing so beautiful?" "It is, indeed, Maria, remarsably zigzag?" "But do you perceive that elegant Mansion just on the margin of the river? Oh! how romantic, how fianciful; it you and I were living there, Matilda, how many agreeable ways would we pass our time! time would pass, and we'd scarcely recognise it?"—"Indeed I should enjoy it much?" "The garden is certainly landsome! Why it reminds me of a perfect Paradise?" (Yes, thought I, if one of you two were added to it, as I perceived a gentleman reclining under a tree.) They were very desirous of knowing the residents, and I, as an Interpreter, would have considered myself fortunate, but it so happened I was ignorant as themselves.—What a mørtification! here is some of the fruits of gnorance—from that moment I left my sea. In a snort time we arrived at Trenton, there took the stage, lodged at Princeton, there took the stage, lodged at Princeton, there took he stage, tively, when I stepped on to the wharf, it re minded me of a city built for nothing else bu grog shops and oyster houses, taverns and refectories, as if we had little else to do but eat and drink-but after a more extensive ex amonation, I must confess, I found it widely different—some parts of the city are very pleasant indeed—their places of amusement ar many, and entertaining—the inhabitants generally are sociable, from my own little knowledge, and from that of others—the men,

THE BRIDAL DAY. When the heart has been made to be with punful emotions—when the breast has been made to heave with the sigh of despon-dency, and the tear of grief has been form! silently trickling down the face of the agonized parent, child, or lover—how sorrowful yet how instructive the task to call the seat tered senses home, and look back to younge days and review the past scenes and inciden of our life. Perhaps some have been the witness of the departure of a revered lather to the world of spirits—some with silent grief have been attendant daughters upon a kind and affectionate mother, who was about leav-ing this world of probation to surrender her-self into the hands of her heavenly Maker— how many have wept as they have caught the ast sound of their exhausted voice blessing them, and exhoring them to pursue the pa-of rectitude and virtue—how of have th solemn sounds from a dying hed knotled is our cars the tricth, that we all must die—how oft have we been suddenly alarmed at the growing intelligence of a much loved friend's lecease and ah! how overwhelming his of a lover's mistress wings its way to beaver when you catch the last sigh and feet the May heaven last throb of that pulse which boat with so ing words.

uch fervour-these reflections were brought to my mind by the recollection of the follow-

on Little river was the residence of an English gentleman who left his native country for the purpose of burying in the solitudes of the American wilds the cause of his unhappy grief—he had lost a fond and affectionate. wife, and the memory of her whom he had loved so dearly preyed upon his mind and threatened such serious consequences that his friends after much personsion induced him his friends after much persussion induced him to leave his country and take with him his only child, (a daughter of fourte on,) and settle on the shores of the above named stream. Here in this happy seclusion did he watch with parental solicitude o'er the expanding mind of his lovely shild—he spent his many leisure hours in teaching her by the prescripts, and assisting by his knowledge in all the useful branches of education. Thus employed, both with the improvement of his daughter and the cultivation of his small farm, the excess of his grief gradually wore away. He and the cultivation of his small farm, the excess of his grief gradually wore away. He had the satisfact on to see his child grow up in innocence and worth—he would trace with fond remembrance, (as the hig tear stood in his eyes) a strong and striking resemblance to her mother—her form was so delicately moulded, and her eyes so beautifully mild, that she seemed more like a fairy of the imagination than a being of existence. At this interesting period of Mary's life, a circumstance occurred that introduced into this quiet family an inmate. She was one day strolling along the shores of the river and admiring the rocky scenery of this place—above her was the remarkable and very romantic cataract of Little river, a rock ten or twelve feet ract of Little river, a rock ten or twelve feet in perpendicular height extended quite across the channel of the river; o'er this the whole river pitched its volume of water in one enriver pitched its volume of water in one en-tire sheet upon a bed of rocks below—at the bottom of the perpendicular fall the rocks were curiously excavated by the constant pouring of the water—the smoothness of the water above its descent, the regularity and beauty of the perpendicular fall, and the craggy towering cliff which Impends the whole were indescribably delightful and ma-jestic. Mary had seated herself upon the projection of a rock and was indulging in the reveries of thought. She was comparing the reveries of thought. She was comparing the stormy passage of life to the foaming element that came thundering at her feet with the most violent agitation from above, and then calmly glided to the ocean of Eternity. At most violent agitation from above, and then calmly glided to the ocean of Eternity. At this moment, casting her eyes upwards, shebeled a cance, guided by one person, glide o'er the perpendicular precipice—a chiling feeling of horror ran through her as she saw the frail bark dashing down the cataract—and overwhelmed by the deluge of waters, it passed from her sight—her nerves were unable to bear longer this shock and sunk down motionless. The cance directed by a more able and experienced hand than Mary had conceived, was seen at a little distance emerging from behind the thick shelves of rocks, perfectly poised and manned by the same handy adventurer who had so bellity slashed down the cataract. Mary, upon recovering, looked wildly around her, exclaiming, "he is lost—I saw the waves cover him, and he sunk to rise no more." The stranger knowing the recent sight had shocked her nerves, quietly conducted her to her father, and begged permission that he might be allowed to call on the following day—his request was granted. Mary continued to talk a little wandering until evening, then falling into a calm sleep, she rose next morning with renovated strength and heard thankfully the particulars of the preceding day; she learned valed strength and heard thankfully the par-ticulars of the preceding day; she learned also, that the stranger had obtained permis-sion to visit the house on that day. THE WORLD

May be compared to a party of pleasure: we are all in pursuit of happiness, set out in great good humour, propose nothing but enjoyment through the course of the whole day. But alsa! few of the party have their expectations answered. Diverted by the objects as we answered. Diverted by the objects as we pass along, one pursues this, another that, and a third a fresh phanton, until every one has singled out his favorite delight. And at this period of the journey, emulation, strift, envy and debate, commonly overtake the travellers, cloud the bright prospects, and mar the rising happiness of the day.

Though the world is wide enough for every

Though the world is wide enough for every one to take a little, and there appears no reason why we justle and make one and her unhappy as we pass along; yet so it is, we are continually the acting and crossing each other at right angles; produced by a supervised was tour first setting out. We find that we have strayed from the path we had selected, become disappointed, suspicious and selfish, sullen and morose, and never reflect but when it is too late. Our temper has lost its sweetness; and we do not feel those kind and gentle, those friendly and fraternal sensations playing round our hearts, that love and benevolence for our fellow travellers, and that interest in their enjoyments, which once warned our bosoms, and without which there is certainly no such thing as a day of pleasure.

We see inclined by the law of nature to live together in love. We feel the emotions of friendship and pity; they are found in every man's breast, unless he does violence to himself and stifles them, and were implanted within us to admonish and excite us to the offices of humanity.

When we feel the misfortunes of life, they lead us to enter into the adversity of others, lead us to enter into the adversity of others, and we know that it is natural to rejoice with those that rejoice. Through the power of sympathy our eyes are overflowed with tears, and our searts melted with pity. We feel interested in every seeme of affliction, through which we see our fellow creatures called to pass—aid not only so, but even the relation of fictious calamities calls forth this gentleness of our nature.

We know that benevolent offices done to those who need them, afford the most solid.

We how that benevolent offices done to those vio need them, afford the most solid and descious of all pleasures to the benefactor. As, therefore, nature has made another man's misfortures our sorrow, and his joys our joys, it must be highly rational, good and pleasant to fall in with those friendly emotions, and live togetherlike brethren in unity and love. It must always be right, and our interest to obey the dicties of nature, when they are friendly the dictes of nature, when they are friendly and benivolent. Here the company were alarmed by a terrific groan from Mr. Croak, who ejaculated, 'Heaven have mercy upon us! did you hear that whizzing noise!—there it is again—there's something wrong in the boiler—fit bursts, we shall all be in Heaven in five minutes!—'The Lord forbid!' ejaculated two or three voices, while others began to scream, and where about to quit their places, when the steward informed them that it was nothing in the world but the spare steam which they were letting off—'Aye, so they always say,' resumed Croak, with an incredulous tone and wo-begone look; 'but it was just the same on board the American steam boat that I was telling you of—fifty-two souls sitting at dimer, laughing and chatting for all the world as we are now, when there comes a whiz, such as we heard a while ago—God help us! there it is once more—and bang! up blew the boiler—fourteen persons scalded to death—large pieces of their flesh found upon the hanks of the river, and a little finger picked up next day in an oyster shell, which by the ring upon it was known to be the captain's. His reception bestever, was far different from that which he expected, as the necessary reward of his success, instead of the proud approving smile of the monarch, the praise due to extraorlimary valour, and the advancement of his success. of the monarch, the praise due to extraordinary valour, and the advancement of his sta from the true statement. He knew the Shah to be a wise and just prince, and that his uncle could only gain favour by binding his eyes in this particular. He embeavoured to prevail on his keeper to carry a letter to the monarch, but in vain. Finding all efforts useless he passively resigned himself to adverse fortune, with the hope that one day he should be permitted to prove to the world the malignity of mitted to prove to the world the malignity of his enemy. One only trouble racked his mind., he left exposed to the mercileus fury of his foe one whom he valued infinitely more than life , one whose existence was as necessary ! his own as the air he breathed. It was on a colm evening when the sun had left the parch ed plains to the influence of the night dew, which where so pure that the brightest subre will rezeive no tarnish from it, and the face o nature were the aspect of repose after the in-tolerable heat of the day, that Sulcon first be-held the lovely Almea, who held him so fast bound in her eilken chains. He had that day been engaged in an arduous conflict with a ed and took prisoner—as he was reclining in his tent after the toil of battle, his attention wa arrested by the musical voice of a female is distress, who was intreating the guards to al low her to pass to his tent , roused by his re them to admit her; a moment afterwards he helded at his feet the most beautiful of creater beings; she was lightly clad in the larked attire with her eaften flowing loosely at her attire with her caffan flowing loosely at her back, beneath which the exquisite symmetry of her person was portrayed with the skill of an almighty artist; the sighs which escaped from her heaving boson betrayed her agony, her long glossy har separated into a thousand raven treases, rolled carelessly down her enamelled broast; her angelic countenance was clouded by grief and sorrow, and the expressive elequence of her large black even as, droaned in tears, it sought a resting place on his, so completely bewildered the young on his, so completely be wildered the your victor, that he stood for some time in speed less delight and admiration, totally unable make any reply to the resterated appeals of behalf of her imprisoned parent, whose life and safety she had come to implore. As soon as he regained his wandering senses, he ran ed her from the ground, assuring her that all his power, and authority should be exerted in her cause—it was at this interview that his heart acknowledged the powerful away of beauty. And the resulting consequences of it were the immediator that youthhar debuck which induced the lovely Almea to follow him to Persia as his destined bride. When he was cast into the solitary cell by the artifices his uncle, she alone of all his followers durat raise her voice in his behalf—she appeared before his relentiess persecutor, and with all the persuance eloquence of distress and grief endeavoured to deprecate his wrath, but to no purpose. The hon in his most violen mood, nay even the savage tyger, who know no purpose. The hon in his most violent mood, any even the savage tyget, who knows no pleasure but in destruction, would have softened before so fair a pleader. But man, goaded on by awarice, urged by the instante calls of ambition, and atmulated by fell hate and revenge, refuses the exercise of humanity, tramples under host the social and affectionate ties which should render him the noblest of creation, and spirns the dictates of conscience. Insult was added to her misery, and she was compelled to leave his accuraced halis with reduobled pangs and tears.

See months passed over the unhappy Sulcon in his dangeon, and found him still in the possession of his, although in a state bordering on distraction, on account of the fair being, who had linked her destiny with his, for during all that time he never received the slightest intestigence respecting her fate. The Shah questioned the men who were brought in, and found that Almea had not been murdered. Hope an dawned in the breast of her father, who quested permission to search for her, but e this was granted, an emir was dispatched o liberate Sulcon from his prison and bring aim before them. The meeting between the old chieftain and his conqueror was joyful on both sides, but it was of short duration, when the young hero learnt the mournful fate of his belove I mistress, determined never to rest until he found her living or dead, he immediately set out for that purpose, and travelled day and night in quest of her. FRANKLIN INSTITUTE.

We published, two weeks since, a list of the premiums offered by the Franklin Institute of this city, for the best samples of me chanical ingenuity, chemical discovery, &c. &c. &c. The influence of the previous liberality of the Institute, has been powerfully or momentary effect; not only is the ingenuity and enterprize of our tradesmen called into action, but new motives for legitimate emulation are found by the publicity that is given to every effort, and the chance of comparison with others of a similar kind. Previthere were few motives for logenious work- ed to the public. men to tax their skill; the ordinar requirements of their occupation afforded ample em Playment for their time, to yield a reasonable reward for their exertion. An extraordinary effort, they were aware, might produce supe-

On Friday evening, two young men, belonging to Houston, went to the "Black line," in the river Gryffe, above the Crossley, for the purpose of bathing, and having quarrelled in the water, they grasped each other, and both went down and were drowned. When their bodies were found, the one had a firm hold of the other by the face with both hands.—Sorted. extraordinary exertions and superior executhe exhibition of his work acquires for him a credit that will be of incalculable advantage to his shop, and it is the praise of the Franklin Institute directors that they have extended their offers of premiums in such a manner that the members of almost every branch of the mechanic arts may be stimulated to competition; and there are discretionary rewards, or at least the encouragement of verbal commendation for almost every production of acknowledged utility and superior execution which may be presented. It was once the wish of the great Philoso-

pher whose name the Institute bears, after viewing the rescusitation of some flies, that he might have animation suspended for a century, and then return to see how affairs prospered in his little republic; doubtless had such a wish been granted, he would have started with astonishment at our vast accession of territory, and wondered at the amazing increase of population, spread from the Atlantic to the lakes-science, his own favourite branch, would afford delight, and all the im provements in policy and increase in power that characterise our country, would be mutter of especial admiration; but no single circumstance, perhaps, in all the variety of im provements in our country, would be found so congenial to the taste of the good man, so much what he would desire to have projected, as that very Institution with which his name should be most intimately associated, as the Franklin Institute of Pennsylvania, offering education and encouragement to the scientific mechanic, and inviting to industry and usefulness the most numerous portion of our citizens. The consciousness that they are pursufing the course which such a man would most emphatically approve, and which their own experience, and the voice of a benefitted public declare to be eminently useful, will stimulate the directors of the Franklin Institute to prosecute, with all ardour, the great and good work upon which they have so nobly entered.

GREECE.

Among the improvements of the times, that of the quality and arrangements of our text books for schools is to be considered, not the least important. Indeed, when we consider the almost indelible effects of early impressions, we cannot too highly appreciate the worth of books that convey, in a simple manner, those important truths that are to form the nucleus of our subsequent acquirements, and effect in the most important degree, the character and tone of our minds. History is a study peculiarly adapted to the tastes an circumstances of childhood, in smuch as its incidents serve to gratify the curiosity, peculiarly the characteristic of youth, and its facts serves to strengthen the mind and give it a healthy and profitable tone. It rarely happens that persons who have commenced in youth a regular study of history, are trou bled with that morbid appetite for novel reading which vitiates the mind of so many of both sexes, disqualifies them for judging of, or enjoying, the realities of life; gives them a feverish expectancy of something they can never possess, or possessing they are unable to onjoy. It is in the realities of life that pellation of "Pallir," will have proper attention, in future, paid to his favours, the first of which we did propose to publish this week; it is, however, reserved for another paper.

The ingenious puzzle which a friend at De Witts valley furnished us a few days ago, along with a new subscriber for "the Casket," we shall certainly publish—the Casket, we have alway-regarded, with particular delight, the successful attempts week there have been full fifty new names added to the list—we are preparing spiedid of the post for in the realistic of life that pathed of his for which the interposit of the post for interposit of the post for interposit of the post for interposit of the post publish—the Casket, we have alway-regarded, with particular delight, the successful attempts week there have been full fifty new names added to the list—we are preparing spiedid of the post for interposit of the post for interposit of the post publishers. Rev. Bishop White, Mr. William J. Revs. were admitted to added to the list-we are preparing spiendio engravings to accompany the future numbers. In "Expectatus," under whatever name he may sasume, we are desirous still to recognize a friend. If any promises have passed between us, they shall be considered binding on our part, so far as present circumstances. England, and that of the United States, are Combinatus," (recollect we make no regarded as among the most popular and adpledge) may, if our present intentions do not prove abortive, find his lucubrations occupying a suitable place in the Orio column—we short time, a revision of Goldsmith's Greece: short time, a revision of Goldsmith's Greece; this was a link in the historical chain much needed-and we doubt not, that the public voice will decide as favourably upon this production as it has upon the previous efforts of the same indefatigable and worthy author. -Goldsmith's Greece, without a revision, is not calculated for schools; it abounds in errors, in indelicate description, improper phrases. and is, indeed, a proof how very badly a good author can write, if indeed there is not much room to doubt Goldsmith ever composed the histories to which his name is attached. " He touches nothing that he does not ornament," is the praise which the great Johnson bestowed upon the author of "The Traveller," "The Deserted Village," Ac. but as an historian, Goldsmith is, to say the least, unde-

serving credit. Mr. Grimshaw has adopted the easy descriptive style of that writer, retained his facts, connected his dates, and enfelt, and it may be anticipated that it will be tirely and handsomely adapted his work to particularly conspicuous in the approaching the school desk. From a knowledge of the book, and some

equaintance with the wants of those for whom it was especially prepared, we unheattatingly recommend Grimshaw's Greece as one of the best (in our opinion, the very ous to the existence of the Franklin Institute, best of) works of the kind that has been offer-

bears a striking resemblance, in some of its parts, to that scene:—

On Friday evening, two young men, belonging to Houston, went to the "Black line," in the river Gryffe, above the Crossley, for the kill devoted to its completion. est son shall be rich, without making reference to the fate of the youngest.

We can scarcely imagine a more valid claim to any property or thing, than that of creation, though that thing were a falsehood. In all mechanical or agricultural operations, such a proof of claims would be most readily admitted. "The law would allow it; and the court award it."

award it."

Yet look at the tenure on which the author holds his book—he must spend, years in the acquisition of that knowledge which forms the mere tools with which he labours, he must possess, in general, germus for its plan, talents and industry for its execution, and separate himself from other means of support while he is engaged in forming it—he must obtain a copy right, incur the risk of a first edition, and by the time the work has secured the and by the time the work has secured the sanction of the public and the corrections which its author is enabled to give it, the copy right expires, and the work is seized by literary sharks, and made common stock to

the whole country.

These things are unequal and unjust—if expense is incurred in publication, common right requires that a hen be had upon the hooks for the payment of slebts; or indeed to change for other pecuniary obligations the owner of them; but do not give a power when there is clearly no right, to give the labours. there is clearly no right, to give to the idle and the illiterate. It to the idle and the illiterate. It is no argument against the limitation of copy right security, that few books are published that arrive the finerteen years allowed by law—who shall say what is valuable?—or who compute for a man the worth of his own possessions?— nav, the very fact that works are published without the consent of the author, is prima facia evidence of their value. But it is known to many persons conversant with the publica-tion of books, that many works of real value do not acquire with the public a just estima-tion unt I long after they first issue from the tion until long after they first issue from the press; this is, perhaps, less to be remarked of works of taste, than those relating especially to the arts and sciences. We could within our small acquaintance, designate one or two individuals who are very nearly dependent upon the sales of a single book, the copy right of which h in their possession. These families will still more need the profits of the publication when they shall have been de-nived of those to whom, by nature, they look publication when they shall have been de-prived of those to whom, by nature, they look for support. Yet in a few years, the time for securing to a man the possession of his own, will expire; and the right to supply the mar-ket and enjoy their own will be denied. There are many evils attending this pre-cious provision of the law, among which, we notice that it absolutely keeps good works already written, out of the market, stance

already written, out of the market; strange already written, out of the market; strange; as this may appear, it is nevertheless a fact. Suppose a demand for a work not generally known; it may be supposed that a bookseller of enterprize would immediately publish it, as there was not copy right law to prevent it; but he would pause upon the enterprize. If he issues an edition it would be proof that the work was desired, and another publisher would follow with the same work and by would follow with the same work, and by glutting the market cause a loss to the first not to both.

Who, or where are the descendants of Shakspeare? Alas! they have been so long poor that they have been forgotten. What would the descendants of the great Master of the English Drama have been, had they alone possessed the right of publishing the works of their ancestor?

of their ancestor?

We make these observations in reference to the authors; we can at least on this subject speak disinterestedly, having as carefully eschewed the sin of authorship, as we humbly and heartily hope to be spared from its con-sequences—yet we cannot but think that the subject is worthy legislative enquiry, not merely for the benefit of interature men, but as an abstract question of right.

A LONE MOUNTAIN.

A letter from a gentleman to the Editor of the Georgia Statesman, says, "About two hours rife from this, there is a lone, solitary Rock, that lifts its awful brow more than a thousand feet above all the surrounding objects of the wilderness. It looks like the thousand feet above all the surrounding ob-jects of the wilderness. It looks like the strong tower of some antediturian monarch, who had long since gone down into its hid-den chambers, to repose his wrath in the unexcitable stillness of a thousand slumbers. Its exterior is bare and bleak. It is about sever miles in circumference—it is about twice its breadth in length—is by actual measurement. 2236 feet above the surface of the creek which flows at its base, and is in lat. 33° 50 N. in the county of DeKalb, in Georgia."
